#### Holland Says Initial Results · of New Process Highly Satisfactory.

Upon one of the farms in Michigan near Detroit there is to be observed today by farmers who may be interested and men of science who are sure to be interested, a phenomenon which is in the form of an experi-ment that may be of lasting value

which is in the form of an experiment that may be of lasting value to the American farmers.

A portion of the farms was selected for this experiment. One half was sewed to corn, in soil which was to serve as the test. In the other half corn was sewn as it customarily is planted by the farmers. Today the corn that was planted upon that portion which was to furnish the test is considerably more than a foot high. The corn that was planted in the other portion acording to the old formula is only two or three incheshigh. The experiment is regarded as giving excellent promises of furnishing high. The experiment is regarded as giving excellent promise of furnishing a formula whereby the farmers may in the future be able to rely upon inexhaustible natural resources for

the fertilization of their farms, This experiment is due to our ex-perience of American men of science who visited Russia shortly before the European war began. They were en-tertained by scientific men of Russia. At one of the gatherings discussion B was centered upon the wonderful black lands of the Ukraine district. These constitute a part of the cich agricultural resources of Ukraine of which Germany is now anxious to cake deventers.

take advantage.
It was said that the Ukraine district, which in area is about as large as France, furnished wheat for Athens in the years when Greece was in her glory. The production of wheat from this black soil has been maintained for centuries and yet the soil has never been artificially fertilized. It is found to be today as rich in the qualities which nurish and produce great crops as it was hundreds of years ago when the peasants of that district began to cultivate wheat.

#### Russian Science Interested.

In the course of the discussion if was said by an American who has gained high reputation in research work that it would probably be found, if scientific investigation were made that these black lands are plastic or soft excepting in the very dry sea-son. Then they become dry and crack and the surface by this natural action of the elements is spread over or cov-ered with the finest kind of dust particles almost atomic in character. This dust by certain chemical attrac tions draws from the atmosphere car bonic acid gas, absorbs it and in that way communicates it to the soil. Thus by one of the infinitely mysterious processes of nature the Ukraine black lands are fertilized, the atmosphere furnishing in this way the needed

There is no other explanation of which the men of science have any knowledge of something that has been regarded as a mysterious phenomenon associated with the unimpaired fertility of Ukraine black lands.

It occurred to men of science aft-er this war began and the Ukraine district began to bear such an important relation to it, and especially, in view of the scarcity of fertilizers in the United States that it might be worth while to make an experiment. Some of the farm lands of Mishigan are very rich and yet it has been found necessary in order to secure the highest production to fertilize it artificially. Would it be possible, men and science asked, to coax nature to furnish the fetilizing quality that is necessary

#### Use Ordinary Clay.

The experiment was made by verting ordinary clay into dust or the smallest particles possible, and having done that to deposit a small quantity of this dust upon the soil. It was also necessary in order to nake comparison or to perfect the experiment that a part of the farm plot should not be treated in this This dust was sifted, so to speak.

in due time corn was planted. So, also corn was planted in an adjacent lot which had not been in like manner treated. To the gratification of those who were making the experiment the corn which was elasted in the old which was planted in the plot which was fur-nishing the experimental tast pranted in the plot which was fur-nishing the experimental tast sprouted early, grew rapidly, and gives promise of coming early to maturity and being in a very healthy state. The other corn is

growing slowly.

In another year more extensive experiments will be made. In the state periments will be made. In the state of Iowa and in parts of Missouri and in Minnesota there are lands some-what similar in texture and appearance to the black lands of Ukrainia It is proposed to treat a part of these lands with fine dust so that it may be determined whether in this way atoms do absorb carbonic acid gas from the atmosphere, converting

## WHEN

## and HOW To Invest Profitably

This is an ever-present problem confronting the investor. Intrinsiconfronting the investor. In cally good securities are bought at the wrong time. To make investments profitable most know when and how to

# it into carbon so deposited as to fur-nish nourishment to the plant. Should the experiments hereafter made demonstrate the accuracy of this scientific theory, then it may be

Furnished by W. B. Hibbs and Con this scientific theory, then it may be that the farmers of the United States will be able within a few years through the capture of natural laws and the utilization of, some of the mysteries of chemistry, to secure abundant food for their plants whereby the crops may be made greater in amount and better in quality. One of the scientific socities of Russia in view of this suggestion of the American men of research planned an exhaustive scientific investigation of the black lands of the Ukraine so that it might be determined whether these lands are self fertilizing.

## NEW YORK-STOCK MARKET. LEADING STOCKS JOIN IN GENERAL ADVANCE

New York Exchange Registers Improvement in All Features.

By BROADAN WALL.

New York, May 15.—Baldwin was
the star performer in Wall street
today, closing the day at the highest price with a net advance of \$1/2. Midvale gained more than here, Colorado Fuel nearly five and Juited States Steel rose to within an eighth of its recent high record.

United States Steel rose to within an eighth of its recent high resord. Tractions were active and materially higher as were the gas stocks. The railroads were quiet but strong. Colorado Fuel and Iron, with its subject record price, gives the Colorado Fuel and Iron, with its new high record price, gives the impression that the government will use that concern for the manufacture of rails and other heavy materials needed for the roads in the July October

Gulf States Steel justified the optimism of its friends by showing an extreme advance of 6% points, although most of this was lost in the late trading. Chevrolet was up 5 points. Westinghouse and Genwest being accumulated.

New Haven's strength is evidently

due to the 25 per cent advance in passenger rates planned by the gov-ernment. It will also help that road if some of the passenger trains are taken off to make the movement of freight more economical.

#### METHODIST BISHOPS' **ELECTION CONFIRMED**

Atlanta, Ga., May 15 .- The elections of six new bishops were confirmed at the day's session of the Methodist conference, and arrangements were made for their formal installation conference, and arrangements were made for their formal installation with impressive services Friday. The bishops elected are: John M. Moore, Nashville; Dr. W. F. McMurray, Louisville; Dr. V. W. Darlington, Barbourville, W. Va.; Dr. F. N. Parker, Emery University; Dr. P. M. Dubose, Nashville and Dr. W. N. Ainsworth, Savannah,

A mild sensation was caused by a report that Dr. Parker will refuse the office, preferring to continue as a pro-fessor at Emery.

Messrs. Smith and Lamar, of Nash-

ville, were re-elected publishing agents and Dr. F. M. Thomas, of Louisville, was elected book editor to succeed Dr. Dubose.

## Mt. Pleasant C. E. Give

will present for the third time "The Colonel's Maid," which was splen-didly performed last evening in the upper hall of the church on Columbia Road.

The players were well fitted to their parts, and the evening was most enjoyable. They expect to realize about \$60 from last evening's performance.

CHIVLIACE FECTIVAL

Measure, Says Kitchin.

Whether the administration water nue bill. Majority Leader Kitchin yesterday gave this answer when asked if a place could be found or the crowded calendar for it.

Kitchin said that if the war reve nue bill were considered necessary, it was probable it would take some time to frame it, 'uring which the water power and several other measures could be passed. If the revenue bill was not called up, he considered it likely that Congress would adjourn after passing pending appropriation bills.

riation bills.

Work on the water power bill was completed yesterday by the House special water power committee. It heard explanations of the measure by Secretary of Agriculture Houston and Secretary of War Baker. A favorable report will be framed
